Thank you

At this time of Thanksgiving, we sincerely appreciate your support.

From the Experts

A Record the U.S. Would Rather NOT Break by Rose Tenuta, M.S. Ed, Ed.S.

As 2018 draws to a close, it is predicted to be another record-breaking year. Unfortunately, this is not a record the United States wants to break: Sexually transmitted infections are again at an all-time high for the fourth year in a row. While sexually transmitted infections (STIs) have plagued humans for centuries, many scientists at the Centers for Disease Control (CDC) have new and serious concerns.

STIs may be caused by bacteria or viruses. Infections caused by bacteria are generally able to be treated and cured with the use of antibiotics. However, many physicians at the CDC are very concerned about antibiotic resistance - when bacteria develop the ability to survive even when the patient takes antibiotics.

MSN:
Carnal knowledge: The sex ed debate

Soaring rates of sexually transmitted diseases among teens are adding urgency to the debate over sex education. Conservatives claim the alarming statistics illustrate why abstinence should be the single mantra when it comes to sex ed. Liberals counter that the increase in disease is the strongest case for more detailed information. Caught in the middle are America's kids, who are more vulnerable than ever to potentially deadly diseases.

National Institute on Drug Abuse:

Study shows impact of social interactions on addictive behavior

A new study published in Nature Neuroscience finds that social interactions can have a profound effect on behaviors related to addiction, and on the brain's response to drug-associated cues. These findings have implications for people with substance use disorders (SUDs), because it suggests that social interaction can change the activity of specific neuronal circuits that control drug craving and relapse. The research was funded by the National Institutes of Health and led by Dr. Marco Venniro from the Intramural Research Program of the National Institute on Drug Abuse (NIDA).

Meet the Team

Mishawn Purnell-O'Neal - Health Educator

Mishawn Purnell-O'Neal joined the Robert Crown Health Center in the Fall of 2016. As a Health Educator, she strives to pique the interest of young audiences by delivering science-based content while making the real-world connection. She is a double-alumni of Benedictine University, receiving a Master in Public Health, and a Bachelor of Science in Health Education. Mishawn has worked in several Public Health settings (March of Dimes, American Academy of Pediatrics, and SIDS Alliance). To broaden her Public Health outreach, she publishes books, educational activities, and board games designed for children and youth. Mishawn is a passionate Public Health professional, and is delighted to be a member of the Robert Crown Health Center family.
